

1 Response of ICML submission 3891

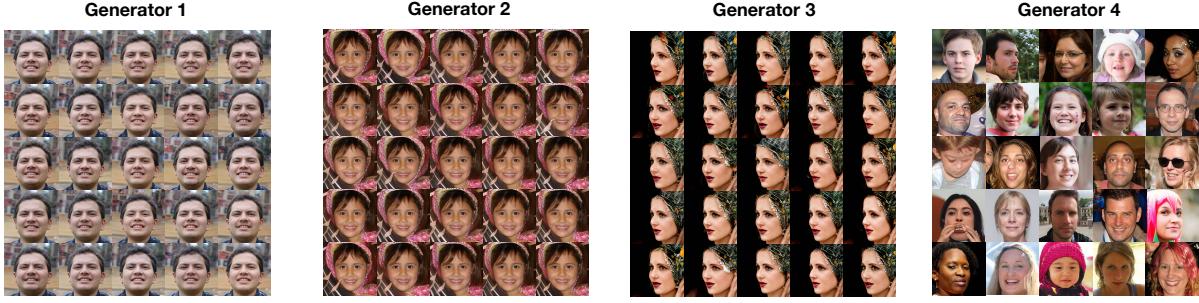

Figure 1: The counterintuitive ranking given by FID-avg score on FFHQ dataset. As we discussed in Fig. 6 in main text, FID-avg even gives better score to collapse models as we shown in generator 1 to 3, where we set truncation $\tau = 0.1$ as we explained in Section 5.3.

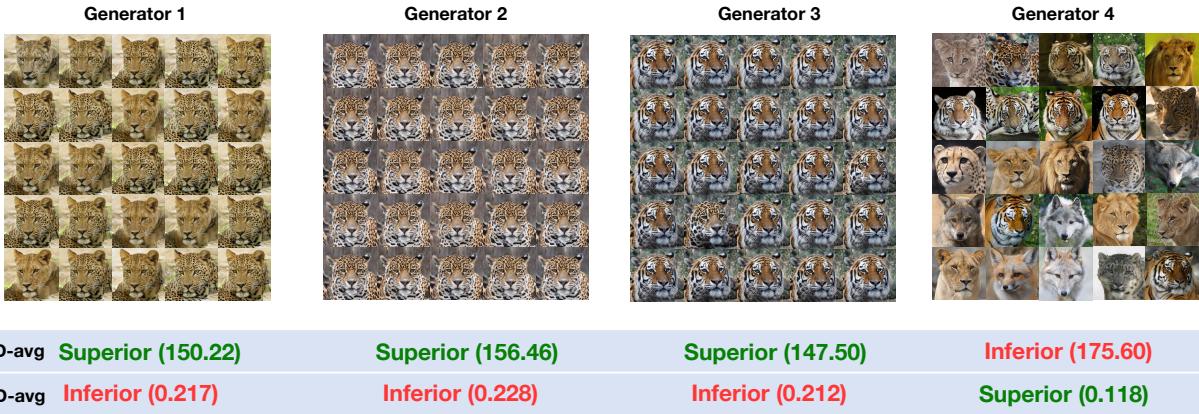

Figure 2: The counterintuitive ranking given by FID-avg score on AFHQ dataset.

Evaluation on Variance-Limited Mixed Federated CIFAR10 Evaluation on Variance-Limited Mixed Federated CIFAR100

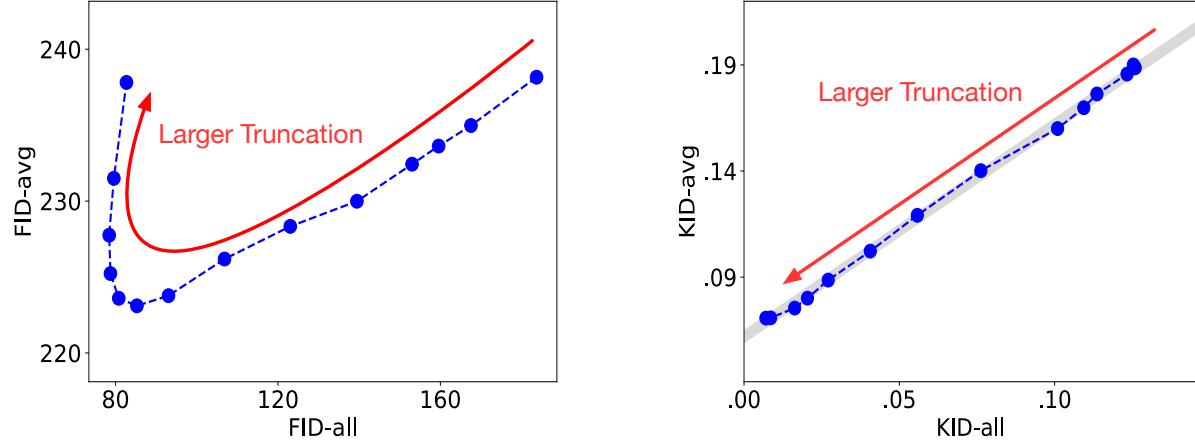

Figure 3: Evaluation results on CIFAR10 where clients hold overlap samples from two classes. The setting is similar to that in Fig. 16 in main text.
